Introduction to Database System

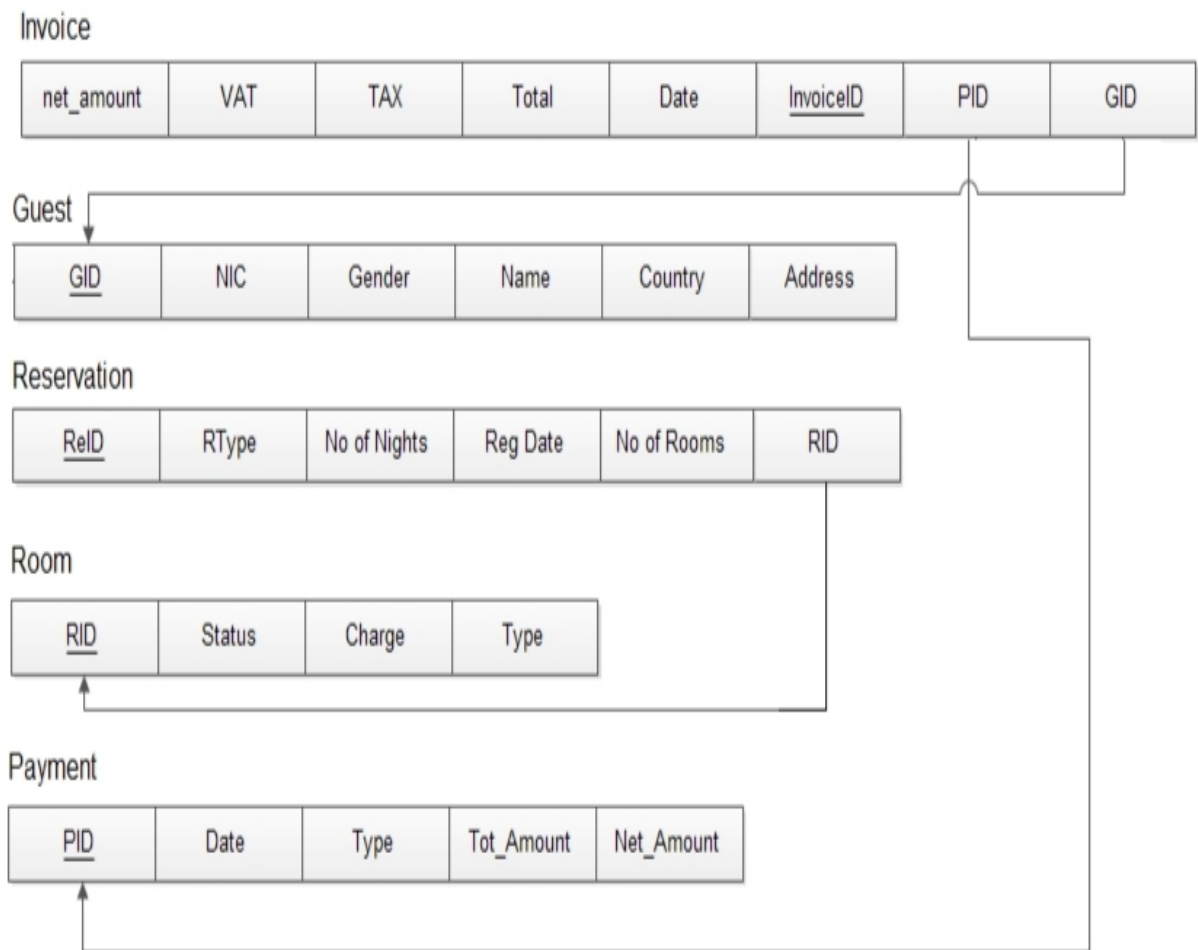

Lab 03

Spring - 20

DDL

DDL refers to "Data Definition Language", a subset of **SQL statements** that change the structure of the database schema in some way, typically by creating, deleting, or modifying schema objects such as databases, tables, and views. Most Impala **DDL statements** start with the keywords **CREATE**, **DROP**, or **ALTER**.

Hotel Reservation System

Task:1

Management of Serena hotel wants to automate their reservation system. For this purpose we developed a schema of reservation system. So your task is to create a new database “Hotel Reservation System” and all tables with their defined keys and constraints, which are given in the above schema.
